

The ability to keep a careful watch on your server farm from a central console, maintain a record of essential statistics, and report as necessary on any actions deemed important, makes the difference between a tightly run computing environment and a business whose server farm is riddled with problems.

Cover your bases.

Action, Interaction, and Reaction. Intelligence.

Simplify Visibility is a set of tools built into the Simplify Suite to assist in monitoring, auditing, and reporting on what's happening in your server farm.

Visibility provides real-time monitoring of information logged only moments prior. This feature may prove vital in the event that a machine momentarily misbehaves with problematic aftereffects or if management wishes to review reports on current server CPU and memory usage. You can even monitor processes on a per session basis for Terminal Servers.

In addition, Visibility reports to key personnel and provides your support personnel with the information they need to troubleshoot user issues quickly and succinctly.

Simplify Monitoring, Auditing, and Reporting

Want a visual representation of the statistics being monitored? With Visibility you can view text and graphs displaying the vital statistics being collected across your server farm from your desktop, consolidating and simplifying your workload. You can even give other administrators access for active monitoring throughout the day.

The reporting tool allows you to save reports in a database and retrieve data up to a year later, making annual analyses a breeze. You can generate reports on statistical data from a webpage, giving you the power to access the health of your farm from anywhere in the world, even from portable devices such as the iPhone and Blackberry, using a standard IIS ASP.NET website. display on your desktop. Give other administrators access to critical widgets for active monitoring throughout the day.
