

Simplify Profiles[®]

User Profile Management

A stable, flexible profile option for user management. Simplify Profiles puts an end to problems associated with user profiles, providing quicker logon times and minimizing the risk of corruption.

- Citrix • VMware
- Microsoft • hybrid
- workstations

- HDX/ICA • PCoIP
- RDP • 32-bit
- 64-bit

- Supports:
- Windows
 - macOS with Citrix

Minimize profile corruption and reduce logon time. Registry settings are saved to a centralized database, eliminating the “back and forth” file copying, leaving less chance for process errors. Simplify Profiles puts an end to bloated roaming profiles, missing profile data, sluggish logon times, and crashed workstations.

Replace group policy settings and administrative templates. Run without hindering existing policies, assignments, or other scripts. Get a central, user-friendly management console for viewing assignments in aggregate and see existing ADMX files.

Deliver personalized workspaces to users regardless of the Windows profile that is in use (Local, Roaming, or Mandatory). No matter where users log in from, their workspace experience remains consistent.

Administrators retain full control over the user experience, because assignments can be made on a wide variety of objects in Active Directory from the centralized console. Auto-discover where applications store user profile content for easy import.

Return on Investment

See a return on investment by giving time back to IT departments to focus on higher-level issues. Eliminate user frustrations with painfully slow logons or crashing processes. Lower support costs by decreasing help desk calls. Boost users' productivity with seamless profile options, giving IT admins back hours they no longer have to spend on profile-related issues.
